Summary of the presentation of a possible data platform solution using Teradata

Introduction

The following is the external summary of the presentation of a possible data platform solution using Teradata.

The dialog with the market was conducted in order to make the IT and Development Agency of the Danish Ministry of Taxation, Udviklings- og Forenklingsstyrelsen (UFST), obtain further knowledge of available solutions on the market. The focus of the dialog was for UFST to get inspiration for the work on the later acquisition of a data platform and tools. The market operators were expected to present how their standard products can support the target architecture.

The intention of the dialog with the market has not been to either preselect market operators or to preclude market operators from future tenders, and it will thus not qualify any market operators for or exclude any market operators from future tenders. The focus of the dialog has been to discuss products on the market and the functionality of these products.

Summary of the presentation of a possible solution using Teradata	
Market operator	Teradata
Date of meeting	June 7, 2019
Welcome and presentation of the market operator's participants	The market operator welcomed UFST, presented its participants, and gave a short presentation of its understanding of UFST's situation. Furthermore, the market operator pointed out former customers.
Session 1. Meeting the identified business needs in the conceptual model	<p>The market operator explained that UFST's conceptual model is similar to Teradata's own Reference Information Architecture and pointed out some observations made on the conceptual model.</p> <p>Subsequently, the market operator provided an overview of its analytic ecosystem and showed how its Reference Information Architecture relates to other relevant components.</p>
Session 2. The ability of the market operator's solution to meet the architectural principles	<p>The market operator explained that the architectural principles have a significant overlap with its own architectural principles, which they showed by mapping the relations between UFST's principles and their own.</p> <p>UFST's preliminary view on architectural principles was discussed, and the market operator came with a few comments and input on the proposed approach.</p>
Session 3. The market operator's previous experience with implementing a similar kind of platform	The market operator explained its technology and offerings and highlighted these in relevant reference cases.
Session 4. The market operator's expectations for the customer with respect to skills and the customer's role in the implementation phase	The market operator did not cover this session during its presentation.

Session 5. The market operator's suggestions on how to ensure the future support and availability of technical skills related to the solution	The market operator explained its ecosystem and service portfolio. In addition, it showed an overview of its portfolio of offerings to illustrate how it supports its customers.
Session 6. The market operator's experience with running a hybrid solution	The market operator showed samples of hybrid set-ups and explained its experience with running hybrid solutions.
Further process	Finally, UFST explained the further process. UFST referred to the overall timeline and explained that UFST will make a summary of the dialog and send it to the market operator to comment before it will be published on the UFST website.
